MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

SEPTEMBER 1936

OCT 31 1936
WEATHER BUREAU

TEMPERATURE

In British Columbia in the East Kootenay, the upper Columbia valley, the most extreme southerly portions of the Kettle and Okanagan valleys, a portion of the country about the middle Fraser valley, and generally along the coast from Vancouver Island northward to Prince Rupert, mean temperatures were either normal or one or two degrees in excess of normal. In the lower Fraser valley, on the most southerly portion of Vancouver Island, and along the neighbouring inner coastlines as well as in the northern portion of the Okanagan valley, in the Thompson valley, the upper Fraser valley, and in the region of the upper Peace river temperatures were generally below normal, some points by two degrees.

Over the agricultural region of the prairies mean temperatures were above normal, generally by two or three degrees. In the extreme southwestern portion of Saskatchewan the excess reached four to eight degrees and four degrees in some parts of the northern fringe of agriculture in Manitoba. In the foothill region of Alberta there were areas where the temperature averaged either normal or one or two degrees below normal. In the Peace River agricultural region temperatures averaged one or two degrees below normal.

In the Lower Lake region of Ontario temperatures were two to four degrees in excess of normal. West of Lake Superior as far as the Lake of the Woods the excess was three or four degrees but generally over northern Ontario excesses were two degrees or less with local deficiency in some parts of the region from Lake Temiskaming to the lower Ottawa and upper St. Lawrence valleys. On the slopes towards James Bay there was a deficiency which reached two degrees at Moosonee.

In Quebec there was an excess of one or two degrees generally along the St. Lawrence valley to the Gulf. In the region of Lake St. John and the upper St. Maurice river deficiencies of one to three degrees were reported.

The eastern coastline of Nova Scotia reported temperatures about normal but around the Bay of Fundy, on Prince Edward Island, and over the greater part of New Brunswick temperatures ranged from normal to one degree or more below normal.

At the mouth of the Mackenzie there was a deficiency of six degrees and along the upper Mackenzie, across Great Slave Lake to the Athabaska River, there was a deficiency of four degrees or more. Along the west coast of Hudson Bay temperatures were slightly above normal at Churchill and three degrees below at Chesterfield. Along Hudson Strait temperatures averaged about one degree below normal.

Along the southern coastline of Newfoundland there was a deficiency of one degree while over the northern portion and the interior there was a deficiency of two or three degrees.

PRECIPITATION

In British Columbia there was a large excess over normal precipitation in the Peace River block where four or five times the normal amount was recorded. Along the Fraser River from its headwaters southward to the Thompson River there was also an excess ranging from fifteen to sixty per cent. Elsewhere in British Columbia precipitation was generally deficient by twenty-five to fifty per cent. or more. The exception was the region around the mouth of the Fraser and Burrard Inlet where there was an excess of ten to twenty per cent.

In Alberta there was a large excess over normal precipitation in the region of the Peace River, the Athabaska River and Lesser Slave Lake where more than twice the normal amount was reported from some stations. Southward from the Athabaska headwaters to the International Boundary precipitation in Alberta was deficient by twenty-five to fifty per cent. for the most part although slight excesses over normal were reported from some points in the southern foothills.

In Saskatchewan an excess over normal precipitation was reported from the northern margin of agriculture but southward there were deficiencies mostly of the order of fifty per cent. or more. From a few points in the hilly region of the upper Assiniboine River excesses were reported.

In Manitoba deficiencies were generally fifteen to thirty-five per cent. Over the great lakes of Manitoba, however, there was a large excess and these conditions extended along a narrow belt from the south end of Lake Manitoba, across Minnedosa and Brandon, towards the International Boundary. In the extreme southeastern corner of Manitoba around the Lake of the Woods there was a small area with excessive precipitation.

In Ontario the rainfall was generally in excess of normal. In the region of the Lake of the Woods and Rainy River the excess was generally twenty to forty per cent. In the Lower Lake region some points reported more than twice the normal amount while fifty to seventy-five per cent. was reported from many interior points between the lakes. On the Keppel Peninsula of Georgian Bay there was a moderate deficiency and also at scattered points on the Lake Ontario shore. East of Lake Superior and northward towards James Bay some points reported an excess and others a deficiency.

In Quebec deficiencies were reported from stations along the shores of the middle St. Lawrence but south and north of the river both excess and deficiency were reported. Along the lower St. Lawrence from the Saguenay River to Anticosti Island there was a deficiency of about twenty-five per cent.

In northern New Brunswick deficiencies averaged about thirty-five per cent. but along the shores of the Bay of Fundy there were excesses ranging from twenty to sixty per cent. In Nova Scotia and the eastern portion of Prince Edward Island excesses were generally large, many places reporting more than twice the normal amount but in Cape Breton Island there appears to have been a small deficiency.

In Newfoundland the normal amount was exceeded by about forty per cent.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column Tm is the mean temperature of the month; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month.
